Topic: Thought note for React e-commerce

- I have created a website using React and Bootstrap
- I used Vs code for writing the code.
- Inside the src folder, a components folder is created to store the newly created files.
- In the components folder 5 files were created they are Header.js, Footer.js, Home.js, HomeCover.js and Slider.js.
- The Header.js file contains the header and the Footer.js file contains the footer.
- In the HomeCover.js file background image and text were added.
- The Slider.js file contains the featured products
- All these files were loaded into the Home.js file.
- Then the Home.js file was loaded into the App.js file.

Learning and Conclusion:

Learned how to use React and Bootstrap to create an e-commerce web site.
